

PROJECT DESCRIPTION

RE&LS provided construction inspection services as a prime on this NYSDOT project for five bridges throughout Regions 2 and 9. RE&LS provided the Resident Engineer as well as office engineer and senior inspectors. The project includes four superstructure replacements and two full replacements on existing alignment located throughout Region 2 in Herkimer and Oneida counties, and Region 9 in Schoharie County.

Work included the superstructure replacement of four bridges, highway approach work, demolition of each existing superstructure and replacement with a new superstructure. Also, this project included two full bridge replacements which will include demolition of the existing structures and complete construction of the replacement bridges on existing alignment. The new bridge at Route 315 over Big Creek required an increase of the hydraulic opening.

RE&LS was responsible for the daily review of project submittals, materials, tracking material certifications, preparing estimates, inspection of all project WZTC, attending meetings, tracking project CPM/schedule. Constant review of “on time” generated project plans including constructability was also required for the duration of this project. RE&LS was also responsible for the preparation of both the engineers’ daily diary and DWR reports including generation of pay quantities. Work operations were tracked using SiteManager and MURK. RE&LS provided construction inspection services as a prime on this design build contract. We provided the Resident Engineer, one NICET IV Office Engineer, one NICET Level III inspector and one NICET Level II inspector.

Contract #D900022

Final Contract Value: \$7,590,000

Owner: NYSDOT

Client: Tioga Construction Co, Inc., Mike Dillon, 315-866-3199

Services Provided: Construction Inspection

Completion Date: 2016
