

PROJECT DESCRIPTION

This \$18M fieldhouse project included a 90,000-square-foot indoor practice facility with a full-length turf athletic field and a three-lane track that runs along one side. Its location is just north of the UB Stadium on the Amherst campus.

RE&LS provided Quality Level B subsurface utility designation services to indicate the presence and approximate horizontal location of underground utilities and structures. RE&LS used ground penetrating radar (GPR) to search for and detect buried structures and existing underground utilities within the project work limits, and to trace particular utility lines or systems. RE&LS provided underground sensing and mark out services for all existing utilities (steam, electric, communications, natural gas, water (town & campus) sanitary and storm sewer within the survey work limits.

Owner: State University Construction Fund / University at Buffalo

Client: LeChase Construction

Services Provided: Utility Designation

Completion Date: 2018
